Realeyes3D raises €7.5 Million (\$9.3M) in Venture Funding *Accelerates leadership in camera phone applications and services*

Paris, France and Beijing, China – *September 5, 2005* – Realeyes3D, the pioneer of handwritten messaging and provider of embedded applications and wireless services for camera phones, announced today that it has secured €7.5 million (USD 9.3 million) in venture capital in an over-subscribed second round of financing led by Atlas Venture and Partech International. The lead investors were joined by first round investors Siemens Acceleration in Communications and I Source Gestion. Realeyes3D develops highly differentiated, innovative mobile imaging services and applications that increase the network traffic generated by camera phones, enhancing the entire camera phone experience. With Realeyes3D, camera phone users can create and send personal handwritten messages, postcards, and fax-quality scanned documents from standard 1Megapixel camera phones.

“As the market of mobile imaging matures, Realeyes3D enables camera phone vendors and mobile operators to extend the value of connected, mobile image capture beyond photography, for both consumers and professional users,” said Realeyes3D CEO Benoit Bergeret. “This funding puts us in a unique position to push forward with sales on a global basis, with a strong focus on delivering useful and compelling new applications and services to the camera phone market.”

“Camera phones are becoming ubiquitous; we found in Realeyes3D an early leader in making such devices truly useful to all mobile users. We are also very excited to be supporting a great founding team on the road to building a leader in the space” declared Fred Destin from Atlas Venture.

Major players in the mobile phone industry have already chosen Realeyes3D to expand the feature set of their camera phones. In February, the company announced the signing of a global licensing agreement with Samsung for the integration of a number of Realeyes3D applications as standard features in its camera phones. Several phones equipped with Realeyes3D’s Digitizer™ and w-Postcard™ are available today on the Korean and Chinese markets. In February, Realeyes3D

launched Digitizer³™ (“Digitizer cubed”), the first commercially available scanning service for camera phones, which is now being tested by several prominent carriers. All applications and services from Realeyes3D are based on sophisticated and highly optimized image processing technologies that have been patented and developed over the past three years. Realeyes3D has received several industry awards including the “DEMOgod” award at DEMOmobile in San Diego in 2003, and Capital IT’s “BEST INNOVATION” award in Paris in 2005.

Go4Venture, a London-based corporate finance advisory firm specialized in international technology equity private placement, advised the company in its fundraising process (www.go4venture.com).

About Realeyes3D

Realeyes3D designs, develops, and sells award-winning embedded applications and mobile services for users of camera phones. Our applications enable new camera-based features in the areas of personal productivity, mobile messaging, user interfaces, gaming, and more. We enable camera phone manufacturers, mobile operators, and mobile content specialists to increase their value proposition to consumer and professional camera phone users. Founded in 2001 and based in Paris, France, Realeyes3D has a sales office in China. Realeyes3D customers include top-tier global handset manufacturers and mobile operators.
